EDUCATION

University of California, Berkeley

Expected May 2027

B.S. Molecular and Cell Biology, Minor in Data Science · GPA 3.71

Relevant coursework: Biochemistry, Genetics, Statistics for Life Sciences, Introduction to Programming (Python), Linear Algebra.

RESEARCH EXPERIENCE

Undergraduate Research Assistant — Chen Lab, UC Berkeley

Jan 2026 – Present

- Maintain mammalian cell culture lines and perform routine passaging, transfection, and cryopreservation.
- Run PCR and quantitative RT-PCR to validate knockdown efficiency across 12 candidate gene targets.
- Perform western blot analysis to confirm protein-level changes; quantify band intensity in ImageJ.
- Assist with CRISPR guide RNA design and screening for a loss-of-function study in neuronal progenitors.
- Built a Python script to clean and merge plate-reader exports, cutting weekly data analysis time by roughly 4 hours.

Summer Research Intern — Stanford Immunology Core

Jun 2025 – Aug 2025

- Prepared and stained samples for flow cytometry panels; gated populations in FlowJo under supervision.
- Used confocal microscopy to image fixed tissue sections and assembled figure panels for a lab meeting.
- Compiled results into a summary deck and delivered a 10-minute presentation to the group (public speaking).

TECHNICAL SKILLS

Programming & Data: Python (pandas, matplotlib), R for basic statistics, SQL fundamentals, Excel (pivot tables, VLOOKUP), Git/GitHub.

Wet Lab: PCR, western blot, cell culture, flow cytometry, CRISPR guide design, gel electrophoresis, ELISA.

Instrumentation: Microscopy (confocal and brightfield), chromatography (HPLC, basic operation), plate readers.

Other: Technical writing, literature review, project management for small student teams, scientific figure preparation.

PROJECTS

Gene Expression Dashboard

Spring 2026

- Built a Streamlit app that loads RNA-seq count tables and renders interactive volcano and heatmap views.
- Applied basic machine learning (k-means clustering) to group samples by expression profile.

Public Health Data Analysis — Course Capstone

Fall 2025

- Analyzed a county-level CDC dataset in Python; produced regression summaries and a written report.

LEADERSHIP & ACTIVITIES

- Vice President, Undergraduate Biology Society — coordinate speaker events for ~120 members.
- Peer tutor, introductory chemistry — 3 hours weekly, small-group instruction.

AWARDS

- Dean's List, Fall 2025 and Spring 2026.
- Undergraduate Research Apprentice Program (URAP) stipend recipient, 2026.
